immediate loss by the static patch
threshold 50–100 V/m: depends on how the field appears
loss by noise
within one year
stable:
bounded orbit and
$\bar{t} > 1$ year
transit hypothesis, 4 K
this model, realistic noise, 4 K
transit hypothesis, 0.1 K
this model, realistic noise, 0.1 K
static patch field $|E|$ (V/m)
